

1 This listing of claims will replace all prior versions, and listings, of claims
2 in the application:

3
4 **Listing of Claims**

5 Claim 1-17 (Canceled)

6
7 Claim 18 (Previously presented): The wireless communication device of
8 claim 26 wherein the instructions are further comprised to send call forwarding
9 instructions to service providers based on conditions set by the user.

10
11 Claim 19 (Original): The wireless communication device of claim 18
12 wherein the call forwarding instructions are to forward calls to a particular carrier
13 network.

14 Claim 20 (Original): The wireless communication device of claim 18
15 wherein the conditions are based on lowest cost to operate for a particular
16 communication service.

17
18 Claim 21 (Original): The wireless communication device of claim 18
19 wherein the conditions are based on quality of service for a particular
20 communication network.

21 Claim 22 (Previously presented): The wireless communication device of
22 claim 26 wherein the instructions comprise service set identifier numbers of
23 wireless area networks accessible by the user.

24
25 Claim 23 (Previously presented): The wireless communication device of

1 claim 26 wherein the instructions are further comprised to store service set
2 identifier numbers of wireless area networks accessible by the wireless
3 communication device.

4 Claim 24 (Previously presented): The wireless communication device of
5 claim 26 wherein the instructions are further comprised to store system
6 identification number (SID) and access information of cellular networks accessible
7 by the wireless communication device.

8
9 Claim 25 (Canceled)

10 Claim 26 (Currently amended): A wireless communication device
11 comprising:

12 a processor;

13 an antenna module configured to receive multiple radio frequency (RF)
14 signals;

15 an analog to digital converter executable on the processor and configured to
16 convert the RF signals to digital signal information used by the processor;

17 instructions stored in a memory executable on the processor to store
18 location of communication networks available to a user and determine from the
19 digital signal information available wireless and wired communication networks to
20 the user, wherein the communication networks are associated with other
21 communication devices; and

22 a GPS module configured to receive RF signals from GPS satellites through
23 the antenna module and analog to digital converter indicating location of the
24 wireless communication device; wherein the instructions are further comprised of
25

1 a map that indicates to a user relative location of the wireless communication
2 device[[]], and

3 instructions stored in the memory executable on the processor to perform
4 the steps of

5 (1) determining available communication services to the user
6 based on the location of the wireless communication device;

7 (2) determining whether an available communication service is to
8 be used based one or more of the following user defined conditions of time
9 of day and location;

10 (3) selecting an acceptable available communication service; and

11 (4) forwarding calls to the acceptable available communication
12 service.

13 Claim 27-36 (Canceled)

14
15 Claim 37 (New): A method of locating a wireless communication
16 device comprising:

17 storing location of communication networks available to a user;

18 determining available wireless and wired communication networks to the
19 user, wherein the communication networks are associated with other
20 communication devices;

21 receiving GPS satellite signals which indicate location of the wireless
22 communication device;

23 determining available communication services to the user based on the
24 location of the wireless communication device;

25 determining whether an available communication service is to be used
based one or more of the following user defined conditions of time of day and

1 location;

2 selecting an acceptable available communication service; and
3 forwarding calls to the acceptable available communication service.

4 Claim 38 (New): The method of claim 37, wherein the storing
5 includes service set identifier numbers of wireless area networks accessible by the
6 user.

7
8 Claim 39 (New): The method of claim 37, wherein the forwarding is
9 to a lowest cost to operate communication service.

10 Claim 40 (New): The method of claim 37 further comprising sending
11 call forwarding instructions to service providers based on conditions set by the
12 user.

13
14 Claim 41 (New): The method of claim 37 further comprising storing
15 service set identifier numbers of wireless area networks accessible by the wireless
16 communication device.

17 Claim 42 (New): The method of claim 37 further comprising storing
18 access information of cellular networks accessible by the wireless communication
19 device.

20
21 Claim 43 (New): A computer-readable medium having computer-
22 executable instructions for causing at least one processor of a wireless
23 communication device to perform acts comprising:

24 storing location of communication networks available to a user;
25

1 determining available wireless and wired communication networks to the
2 user, wherein the communication networks are associated with other
3 communication devices;

4 receiving GPS satellite signals which indicate location of the wireless
5 communication device;

6 determining available communication services to the user based on the
7 location of the wireless communication device;

8 determining whether an available communication service is to be used
9 based one or more of the following user defined conditions of time of day and
10 location;

11 selecting an acceptable available communication service; and

12 forwarding calls to the acceptable available communication service.

13
14 Claim 44 (New): The computer-readable medium of claim 43,
15 wherein the storing includes service set identifier numbers of wireless area
16 networks accessible by the user.

17 Claim 45 (New): The computer-readable medium of claim 43,
18 wherein the forwarding is to a lowest cost to operate communication service.

19
20 Claim 46 (New): The computer-readable medium of claim 43 further
21 comprising sending call forwarding instructions to service providers based on
22 conditions set by the user.

23 Claim 47 (New): The computer-readable medium of claim 43 further
24 comprising storing service set identifier numbers of wireless area networks
25 accessible by the wireless communication device.

1 Claim 48 (New): The computer-readable medium of claim 43 further
2 comprising storing access information of cellular networks accessible by the
3 wireless communication device.
